

QA/QC Manager

Are you an experienced, communicative QA/QC Manager who is eager to contribute (quite literally!) to the foundation of offshore wind farms across Europe? Do you want to play a role as a QA/QC Manager in advancing the energy transition towards clean energy by coordinating our Quality department? At Sif, you can!

What will you do? As a QA/QC Manager at Sif, you will be responsible for ensuring and safeguarding the quality from order to final delivery, ensuring compliance with established quality standards. We have a Manager QA/QC for both our locations in Roermond and MV2. You will be based in Roermond. You'll have an analytical and advisory role regarding quality deviations, ensuring compliance with all specified requirements for (partial) product deliveries to the customer and the as-built dossier.

As a QA/QC Manager, you'll ensure the quality of our products and processes, leading our QA/QC team and collaborating closely with various departments within the company to ensure all operational activities meet the required standards and specifications.

Responsibilities:

- Developing, implementing, and maintaining QA/QC procedures and policies
- Leading internal and external audits to ensure compliance with quality standards
- Establishing KPIs and performance indicators for quality and continuous improvement
- Identifying quality issues and initiating corrective actions
- Maintaining good relationships with suppliers and customers regarding quality matters
- Leading training and workshops to increase awareness of quality standards
- Reporting to management on the performance of the QA/QC program

Where will you be working? You'll join the Quality department in Roermond, responsible for ensuring services and processes, improving and monitoring quality. The department provides advisory support during tender phases regarding specified quality requirements and aims for possible alternatives within these requirements to meet quality standards aligned with the company's policies and strategies. Additionally, the department ensures the implementation and safeguarding of processes, systems, procedures, and instructions to meet the specified quality requirements of a project.

At our Roermond location, steel subcomponents and final products are produced, while at the MV2 location, the complete monopile is assembled and coated for delivery to the customer. Inspection is carried out through various measurements such as flange measurements, attachment location, lengths, diameters, circumferences using tools including easy laser, total station, and photogrammetry.

Who are you? You identify with our profile and are excited about the job description. You have an open attitude and aren't afraid to ask questions to ensure you have the right information to do your job well. You're communicative, socially strong, and have a customer-oriented approach. Moreover, you're meticulous in your work and can uphold agreements. You bring the necessary experience and see yourself confidently taking on this role.

You possess:

- Bachelor's degree, supplemented with an IWE certification, visual welding inspector VT-w2 certification, or IWI-C certification and VCA-VOL certification
- Knowledge of the offshore industry, welding techniques, and quality systems
- Leadership skills
- Proficiency in English

What does Sif offer you?

- Salary between €4460 and €7148 depending on your age and experience
- 1-year contract, with the possibility of a permanent position
- Good pension scheme
- 25 vacation days and 13 ADV (additional days off) days
- Training and development opportunities
- A friendly team and a pleasant working environment
- Room for continuous growth and development
- Impact on the energy transition and sustainability of the Netherlands and Europe

Your development at Sif With your application, you can become part of a fantastic company with strong growth ambitions, a place of craftsmanship where there's plenty of room to show your

entrepreneurship and continue your development. At Sif, you'll have a direct impact on the energy transition and contribute to a greener world.
